

Extremity Drape, bilateral leg, w/ Drisite® Plus

- New extremity drape with Drisite Plus for outstanding fluid control in wet surgery
- Impermeable materials all over to protect from strikethrough in all surgical situations
- Reinforced materials in the critical zone minimise tearing and risk of breach in the infection control system
- The new BARRIER® surgical drapes feature soft and comfortable materials that conform naturally to the body

1 Unfold the table cover and place it under the patient's legs.

2 Place the unfolded extremity drape over the patient's feet with the instruction label pointing up towards the patient's body.

3 Reach through the elastic opening and grasp the patient's feet. Unfold the drape over the foot end of the op-table and then upwards.

4 Unfold the upper part of the drape over the anesthetic frame.
